## To Waste or Not to Waste

As one of the top hazardous occupations in the United States, histology's major safety concerns revolve around the hazardous chemicals and waste generated in the laboratory. This safety workshop focuses on identifying the common hazards in the laboratory, understanding the requirements and regulations of satellite accumulation and waste disposal, and identifying

appropriate handling and storage of laboratory waste. Attendees will understand the difference between waste storage and satellite accumulation, as well as the regulations for both. Common EPA deficiencies pertaining to waste and spills are discussed. Both basic and obscure knowledge is shared, along with helpful tips to improve the safety of your laboratory.

### Enlightened EH&S

The Struggle of the RCRA Closed Container Rule.
